

GitHub Copilot Training Assessment

Learner MCQ Check - 50 Questions - 30 Minutes

CloudThat | Client: Tredence | Faculty: Ankit Jha | Subject: Copilot Training

Instructions

Open this PDF in a modern web browser such as Chrome, Edge, Safari, or Firefox. Type A, B, C, or D in the answer box for each question. Save the completed PDF and submit it when instructed by the faculty.

Answer all 50 simple multiple-choice questions in 30 minutes. This assessment checks basic understanding of GitHub, Copilot, ADLC, RAG, OpenRouter, testing, security, and observability.

1. What is GitHub Copilot mainly used for?

- ☐ A. Writing and understanding code with AI help
- ☐ B. Designing office furniture
- ☐ C. Sending email newsletters
- ☐ D. Compressing image files

Answer:

2. What is GitHub used for?

- ☐ A. Hosting, sharing, and versioning code
- ☐ B. Only editing photos
- ☐ C. Only making slides
- ☐ D. Only sending chat messages

Answer:

3. What is the full form of PR in GitHub?

- ☐ A. Pull Request
- ☐ B. Project Report
- ☐ C. Private Route
- ☐ D. Prompt Review

Answer:

4. What is a repository?

- ☐ A. A place where project files and history are stored
- ☐ B. A web browser cache
- ☐ C. A password manager
- ☐ D. A video player

Answer:

5. What is a branch in Git?

- ☐ A. A separate line of work in the same repository
- ☐ B. A folder for images only
- ☐ C. A database table
- ☐ D. A type of API key

Answer:

6. What is a commit?

- ☐ A. A saved snapshot of changes in Git
- ☐ B. A login page
- ☐ C. A chatbot answer
- ☐ D. A CSS color

Answer:

CloudThat | Client: Tredence | Faculty: Ankit Jha | Subject: Copilot Training

7. What is a README file commonly used for?

- ☐ A. Explaining how to understand, set up, and run a project
- ☐ B. Storing secret API keys
- ☐ C. Replacing all tests
- ☐ D. Deleting old code

Answer:

8. What does the .md file extension usually mean?

- ☐ A. Markdown file
- ☐ B. Model database
- ☐ C. Manual driver
- ☐ D. Main directory

Answer:

9. What is the MD file in a skill usually used for?

- ☐ A. Describing the skill, trigger, constraints, and examples
- ☐ B. Storing images only
- ☐ C. Running the server
- ☐ D. Saving passwords

Answer:

10. What MD file can steer instructions for GitHub Copilot in a repository?

- ☐ A. copilot-instructions.md
- ☐ B. passwords.md
- ☐ C. random.md
- ☐ D. delete.md

Answer:

11. In ADLC, what should you do first?

- ☐ A. Plan and define scope
- ☐ B. Deploy immediately
- ☐ C. Delete tests
- ☐ D. Ignore requirements

Answer:

12. After planning in ADLC, what do you usually do next?

- ☐ A. Execute or build within the defined scope
- ☐ B. Skip coding forever
- ☐ C. Remove documentation
- ☐ D. Change unrelated files

Answer:

13. What is an AI scope statement?

- ☐ A. A note describing what AI can and cannot modify
- ☐ B. A database password
- ☐ C. A browser plugin
- ☐ D. A CSS file

Answer:

14. What does UAT usually stand for?

- ☐ A. User Acceptance Testing
- ☐ B. Universal API Token
- ☐ C. User Access Theme
- ☐ D. Unit Automation Tool

Answer:

CloudThat | Client: Tredence | Faculty: Ankit Jha | Subject: Copilot Training

15. Why should UAT-passed code be protected?

- ☐ A. To avoid breaking already accepted behavior
- ☐ B. To make the app slower
- ☐ C. To remove working tests
- ☐ D. To hide errors

Answer:

16. How many default working modes are commonly discussed in this training for VS Code/Copilot workflow?

- ☐ A. Three: Ask, Plan, and Execute
- ☐ B. One: Delete
- ☐ C. Five: Paint modes
- ☐ D. Ten: Database modes

Answer:

17. Can the Ask mode run code or change files?

- ☐ A. No, it is for asking and understanding
- ☐ B. Yes, always
- ☐ C. Only on weekends
- ☐ D. Only for images

Answer:

18. Can the Plan mode run code or change files?

- ☐ A. No, it is for planning before execution
- ☐ B. Yes, it must edit every file
- ☐ C. Only if there is no README
- ☐ D. Only for SQL

Answer:

19. Which mode is used when you want the agent to make changes or run code?

- ☐ A. Execute or Agent mode
- ☐ B. Ask mode only
- ☐ C. Read-only mode only
- ☐ D. Presentation mode

Answer:

20. What is the full form of RAG?

- ☐ A. Retrieval-Augmented Generation
- ☐ B. Random API Generator
- ☐ C. Remote Access Gateway
- ☐ D. Rapid App Guide

Answer:

21. What does RAG help a chatbot do?

- ☐ A. Answer using retrieved context or documents
- ☐ B. Ignore all data
- ☐ C. Only format CSS
- ☐ D. Only create passwords

22. What is Text2SQL?

- ☐ A. Converting natural language questions into SQL queries
- ☐ B. Changing text color to blue
- ☐ C. Uploading images
- ☐ D. Creating Git branches

Answer:

23. What is OpenRouter used for?

- ☐ A. Accessing different LLM models through an API
- ☐ B. Creating Git commits only
- ☐ C. Replacing a database
- ☐ D. Opening image files

Answer:

24. What is an API key?

- ☐ A. A secret token used to access a service
- ☐ B. A public heading
- ☐ C. A CSS class
- ☐ D. A folder name

Answer:

25. What are credits in an LLM setting?

- ☐ A. Usage balance or units consumed when using models
- ☐ B. Git branches
- ☐ C. HTML tags
- ☐ D. Database columns only

Answer:

26. What kind of model should you use by default for normal tasks?

- ☐ A. A medium model
- ☐ B. The largest model always
- ☐ C. No model
- ☐ D. A drawing model only

Answer:

27. What kind of model should you use for really hard problems?

- ☐ A. A larger or stronger model
- ☐ B. A smaller model always
- ☐ C. A spreadsheet only
- ☐ D. No AI model

Answer:

28. What does effort mean for an AI model?

- ☐ A. How much reasoning or compute the model uses
- ☐ B. The color of the UI
- ☐ C. The number of folders
- ☐ D. The file extension

Answer:

29. Can you add or use more models in a Copilot-based workflow?

- ☐ A. Yes, by using OpenRouter or other inference services where appropriate
- ☐ B. No, models do not exist
- ☐ C. Only by deleting GitHub
- ☐ D. Only inside CSS

30. What is a prompt?

- ☐ A. An instruction or request given to an AI model
- ☐ B. A database backup
- ☐ C. A hidden password
- ☐ D. A mouse setting

Answer:

31. What should a good coding prompt include?

- ☐ A. Task, scope, constraints, and test requirements
- ☐ B. Only the word fix
- ☐ C. Only emojis
- ☐ D. Only unrelated files

Answer:

32. Which prompt is risky?

- ☐ A. Change anything you want in the whole repo
- ☐ B. Only update this one function and add tests
- ☐ C. Do not touch UAT files
- ☐ D. Keep the schema unchanged

Answer:

33. What is logging?

- ☐ A. Recording events and errors from an application
- ☐ B. Deleting source code
- ☐ C. Making a logo
- ☐ D. Changing font size

Answer:

34. What is used to see what events are happening in an application?

- ☐ A. Logs
- ☐ B. Random guesses
- ☐ C. Image filters
- ☐ D. Branch names only

Answer:

35. What is observability?

- ☐ A. Understanding system behavior using logs, metrics, and traces
- ☐ B. Only changing colors
- ☐ C. Only writing SQL
- ☐ D. Only renaming files

Answer:

36. What are metrics?

- ☐ A. Numeric measurements about system behavior
- ☐ B. Secret passwords
- ☐ C. HTML buttons
- ☐ D. GitHub usernames only

Answer:

37. What are traces used for?

- ☐ A. Following a request across parts of a system
- ☐ B. Drawing icons
- ☐ C. Deleting tests
- ☐ D. Creating API keys

38. Why do we write tests?

- ☐ A. To check that code works as expected
- ☐ B. To make code fail on purpose
- ☐ C. To hide bugs
- ☐ D. To remove documentation

Answer:

39. What is a unit test?

- ☐ A. A test for a small part of the code
- ☐ B. A production server
- ☐ C. A GitHub profile
- ☐ D. An image upload folder

Answer:

40. What is an integration test?

- ☐ A. A test that checks multiple parts working together
- ☐ B. A font setting
- ☐ C. A secret key
- ☐ D. A single comment

Answer:

41. What is CI commonly used for?

- ☐ A. Running automated checks when code changes
- ☐ B. Writing only marketing emails
- ☐ C. Replacing all developers
- ☐ D. Only storing images

Answer:

42. What is a status page or health endpoint used for?

- ☐ A. Showing whether the app or service is working
- ☐ B. Making passwords public
- ☐ C. Deleting branches
- ☐ D. Changing Git history

Answer:

43. What is authentication?

- ☐ A. Checking who the user is
- ☐ B. Checking only text color
- ☐ C. Running SQL without safety
- ☐ D. Deleting logs

Answer:

44. What is authorization?

- ☐ A. Checking what an authenticated user is allowed to do
- ☐ B. Changing an image format
- ☐ C. Creating a README title
- ☐ D. Counting files only

Answer:

45. Which item should never be committed to GitHub?

- ☐ A. API keys and passwords
- ☐ B. README instructions
- ☐ C. Test files
- ☐ D. CSS files

46. What is a hallucination in an AI answer?

- ☐ A. A made-up or unsupported answer
- ☐ B. A passing test
- ☐ C. A branch name
- ☐ D. A valid SQL table

Answer:

47. What is a grounded answer?

- ☐ A. An answer based on provided context or data
- ☐ B. An answer invented without evidence
- ☐ C. A deleted file
- ☐ D. A random UI color

Answer:

48. What should a chatbot do if the answer is not in the data?

- ☐ A. Say that the answer is not available in the provided data
- ☐ B. Invent a confident answer
- ☐ C. Expose API keys
- ☐ D. Delete the database

Answer:

49. What is self-evaluation in this training?

- ☐ A. Reviewing your own project against the rubric and saving evidence
- ☐ B. Skipping all tests
- ☐ C. Changing the assignment title
- ☐ D. Submitting empty files

Answer:

50. What should you do after a Copilot coding session?

- ☐ A. Review the changed files and run relevant checks
- ☐ B. Ignore the diff
- ☐ C. Commit secrets
- ☐ D. Delete the README

Answer:
