

GitHub Copilot Training Assessment

Learner MCQ Check - 50 Questions - 30 Minutes

CloudThat | Client: Tredence | Faculty: Ankit Jha | Subject: Copilot Training

Instructions

Open this PDF in a modern web browser such as Chrome, Edge, Safari, or Firefox. The correct answer is prefilled in each answer box for review. Save the completed PDF and submit it when instructed by the faculty.

Answer all 50 simple multiple-choice questions in 30 minutes. This assessment checks basic understanding of GitHub, Copilot, ADLC, RAG, OpenRouter, testing, security, and observability.

1. What is GitHub Copilot mainly used for?

- ☐ A. Compressing image files
- ☐ B. Sending email newsletters
- ☐ C. Designing office furniture
- ☐ D. Writing and understanding code with AI help

Answer:

2. What is GitHub used for?

- ☐ A. Only sending chat messages
- ☐ B. Only editing photos
- ☐ C. Only making slides
- ☐ D. Hosting, sharing, and versioning code

Answer:

3. What is the full form of PR in GitHub?

- ☐ A. Pull Request
- ☐ B. Prompt Review
- ☐ C. Private Route
- ☐ D. Project Report

Answer:

4. What is a repository?

- ☐ A. A web browser cache
- ☐ B. A place where project files and history are stored
- ☐ C. A password manager
- ☐ D. A video player

Answer:

5. What is a branch in Git?

- ☐ A. A type of API key
- ☐ B. A folder for images only
- ☐ C. A database table
- ☐ D. A separate line of work in the same repository

Answer:

6. What is a commit?

- ☐ A. A CSS color
- ☐ B. A saved snapshot of changes in Git
- ☐ C. A chatbot answer
- ☐ D. A login page

Answer:

CloudThat | Client: Tredence | Faculty: Ankit Jha | Subject: Copilot Training

7. What is a README file commonly used for?

- ☐ A. Explaining how to understand, set up, and run a project
- ☐ B. Storing secret API keys
- ☐ C. Replacing all tests
- ☐ D. Deleting old code

Answer:

8. What does the .md file extension usually mean?

- ☐ A. Model database
- ☐ B. Main directory
- ☐ C. Markdown file
- ☐ D. Manual driver

Answer:

9. What is the MD file in a skill usually used for?

- ☐ A. Storing images only
- ☐ B. Running the server
- ☐ C. Describing the skill, trigger, constraints, and examples
- ☐ D. Saving passwords

Answer:

10. What MD file can steer instructions for GitHub Copilot in a repository?

- ☐ A. random.md
- ☐ B. passwords.md
- ☐ C. copilot-instructions.md
- ☐ D. delete.md

Answer:

11. In ADLC, what should you do first?

- ☐ A. Delete tests
- ☐ B. Ignore requirements
- ☐ C. Plan and define scope
- ☐ D. Deploy immediately

Answer:

12. After planning in ADLC, what do you usually do next?

- ☐ A. Skip coding forever
- ☐ B. Remove documentation
- ☐ C. Change unrelated files
- ☐ D. Execute or build within the defined scope

Answer:

13. What is an AI scope statement?

- ☐ A. A database password
- ☐ B. A note describing what AI can and cannot modify
- ☐ C. A CSS file
- ☐ D. A browser plugin

Answer:

14. What does UAT usually stand for?

- ☐ A. User Access Theme
- ☐ B. Universal API Token
- ☐ C. User Acceptance Testing
- ☐ D. Unit Automation Tool

Answer:

CloudThat | Client: Tredence | Faculty: Ankit Jha | Subject: Copilot Training

15. Why should UAT-passed code be protected?

- ☐ A. To remove working tests
- ☐ B. To hide errors
- ☐ C. To avoid breaking already accepted behavior
- ☐ D. To make the app slower

Answer:

16. How many default working modes are commonly discussed in this training for VS Code/Copilot workflow?

- ☐ A. Five: Paint modes
- ☐ B. Three: Ask, Plan, and Execute
- ☐ C. Ten: Database modes
- ☐ D. One: Delete

Answer:

17. Can the Ask mode run code or change files?

- ☐ A. No, it is for asking and understanding
- ☐ B. Only for images
- ☐ C. Yes, always
- ☐ D. Only on weekends

Answer:

18. Can the Plan mode run code or change files?

- ☐ A. Only if there is no README
- ☐ B. Yes, it must edit every file
- ☐ C. Only for SQL
- ☐ D. No, it is for planning before execution

Answer:

19. Which mode is used when you want the agent to make changes or run code?

- ☐ A. Ask mode only
- ☐ B. Read-only mode only
- ☐ C. Execute or Agent mode
- ☐ D. Presentation mode

Answer:

20. What is the full form of RAG?

- ☐ A. Rapid App Guide
- ☐ B. Retrieval-Augmented Generation
- ☐ C. Random API Generator
- ☐ D. Remote Access Gateway

Answer:

21. What does RAG help a chatbot do?

- ☐ A. Ignore all data
- ☐ B. Only format CSS
- ☐ C. Only create passwords
- ☐ D. Answer using retrieved context or documents

Answer:

22. What is Text2SQL?

- ☐ A. Creating Git branches
- ☐ B. Converting natural language questions into SQL queries
- ☐ C. Uploading images
- ☐ D. Changing text color to blue

Answer:

23. What is OpenRouter used for?

- ☐ A. Replacing a database
- ☐ B. Creating Git commits only
- ☐ C. Accessing different LLM models through an API
- ☐ D. Opening image files

Answer:

24. What is an API key?

- ☐ A. A CSS class
- ☐ B. A public heading
- ☐ C. A folder name
- ☐ D. A secret token used to access a service

Answer:

25. What are credits in an LLM setting?

- ☐ A. HTML tags
- ☐ B. Usage balance or units consumed when using models
- ☐ C. Git branches
- ☐ D. Database columns only

Answer:

26. What kind of model should you use by default for normal tasks?

- ☐ A. A drawing model only
- ☐ B. The largest model always
- ☐ C. A medium model
- ☐ D. No model

Answer:

27. What kind of model should you use for really hard problems?

- ☐ A. A spreadsheet only
- ☐ B. A smaller model always
- ☐ C. No AI model
- ☐ D. A larger or stronger model

Answer:

28. What does effort mean for an AI model?

- ☐ A. The color of the UI
- ☐ B. How much reasoning or compute the model uses
- ☐ C. The file extension
- ☐ D. The number of folders

Answer:

29. Can you add or use more models in a Copilot-based workflow?

- ☐ A. Only by deleting GitHub
- ☐ B. Only inside CSS
- ☐ C. Yes, by using OpenRouter or other inference services where appropriate
- ☐ D. No, models do not exist

30. What is a prompt?

- ☐ A. A mouse setting
- ☐ B. A database backup
- ☐ C. An instruction or request given to an AI model
- ☐ D. A hidden password

Answer:

31. What should a good coding prompt include?

- ☐ A. Only unrelated files
- ☐ B. Only the word fix
- ☐ C. Only emojis
- ☐ D. Task, scope, constraints, and test requirements

Answer:

32. Which prompt is risky?

- ☐ A. Only update this one function and add tests
- ☐ B. Keep the schema unchanged
- ☐ C. Change anything you want in the whole repo
- ☐ D. Do not touch UAT files

Answer:

33. What is logging?

- ☐ A. Deleting source code
- ☐ B. Making a logo
- ☐ C. Changing font size
- ☐ D. Recording events and errors from an application

Answer:

34. What is used to see what events are happening in an application?

- ☐ A. Random guesses
- ☐ B. Logs
- ☐ C. Branch names only
- ☐ D. Image filters

Answer:

35. What is observability?

- ☐ A. Only renaming files
- ☐ B. Only changing colors
- ☐ C. Understanding system behavior using logs, metrics, and traces
- ☐ D. Only writing SQL

Answer:

36. What are metrics?

- ☐ A. Secret passwords
- ☐ B. Numeric measurements about system behavior
- ☐ C. GitHub usernames only
- ☐ D. HTML buttons

Answer:

37. What are traces used for?

- ☐ A. Following a request across parts of a system
- ☐ B. Creating API keys
- ☐ C. Drawing icons
- ☐ D. Deleting tests

38. Why do we write tests?

- ☐ A. To check that code works as expected
- ☐ B. To hide bugs
- ☐ C. To make code fail on purpose
- ☐ D. To remove documentation

Answer:

39. What is a unit test?

- ☐ A. A test for a small part of the code
- ☐ B. A production server
- ☐ C. A GitHub profile
- ☐ D. An image upload folder

Answer:

40. What is an integration test?

- ☐ A. A secret key
- ☐ B. A single comment
- ☐ C. A test that checks multiple parts working together
- ☐ D. A font setting

Answer:

41. What is CI commonly used for?

- ☐ A. Writing only marketing emails
- ☐ B. Only storing images
- ☐ C. Running automated checks when code changes
- ☐ D. Replacing all developers

Answer:

42. What is a status page or health endpoint used for?

- ☐ A. Making passwords public
- ☐ B. Showing whether the app or service is working
- ☐ C. Changing Git history
- ☐ D. Deleting branches

Answer:

43. What is authentication?

- ☐ A. Deleting logs
- ☐ B. Running SQL without safety
- ☐ C. Checking who the user is
- ☐ D. Checking only text color

Answer:

44. What is authorization?

- ☐ A. Changing an image format
- ☐ B. Checking what an authenticated user is allowed to do
- ☐ C. Creating a README title
- ☐ D. Counting files only

Answer:

45. Which item should never be committed to GitHub?

- ☐ A. CSS files
- ☐ B. README instructions
- ☐ C. API keys and passwords
- ☐ D. Test files

46. What is a hallucination in an AI answer?

- ☐ A. A passing test
- ☐ B. A valid SQL table
- ☐ C. A branch name
- ☐ D. A made-up or unsupported answer

Answer:

47. What is a grounded answer?

- ☐ A. An answer invented without evidence
- ☐ B. A deleted file
- ☐ C. A random UI color
- ☐ D. An answer based on provided context or data

Answer:

48. What should a chatbot do if the answer is not in the data?

- ☐ A. Invent a confident answer
- ☐ B. Delete the database
- ☐ C. Expose API keys
- ☐ D. Say that the answer is not available in the provided data

Answer:

49. What is self-evaluation in this training?

- ☐ A. Submitting empty files
- ☐ B. Skipping all tests
- ☐ C. Changing the assignment title
- ☐ D. Reviewing your own project against the rubric and saving evidence

Answer:

50. What should you do after a Copilot coding session?

- ☐ A. Ignore the diff
- ☐ B. Commit secrets
- ☐ C. Review the changed files and run relevant checks
- ☐ D. Delete the README

Answer:
